

AI Voice Receptionist & Booking — Sequence

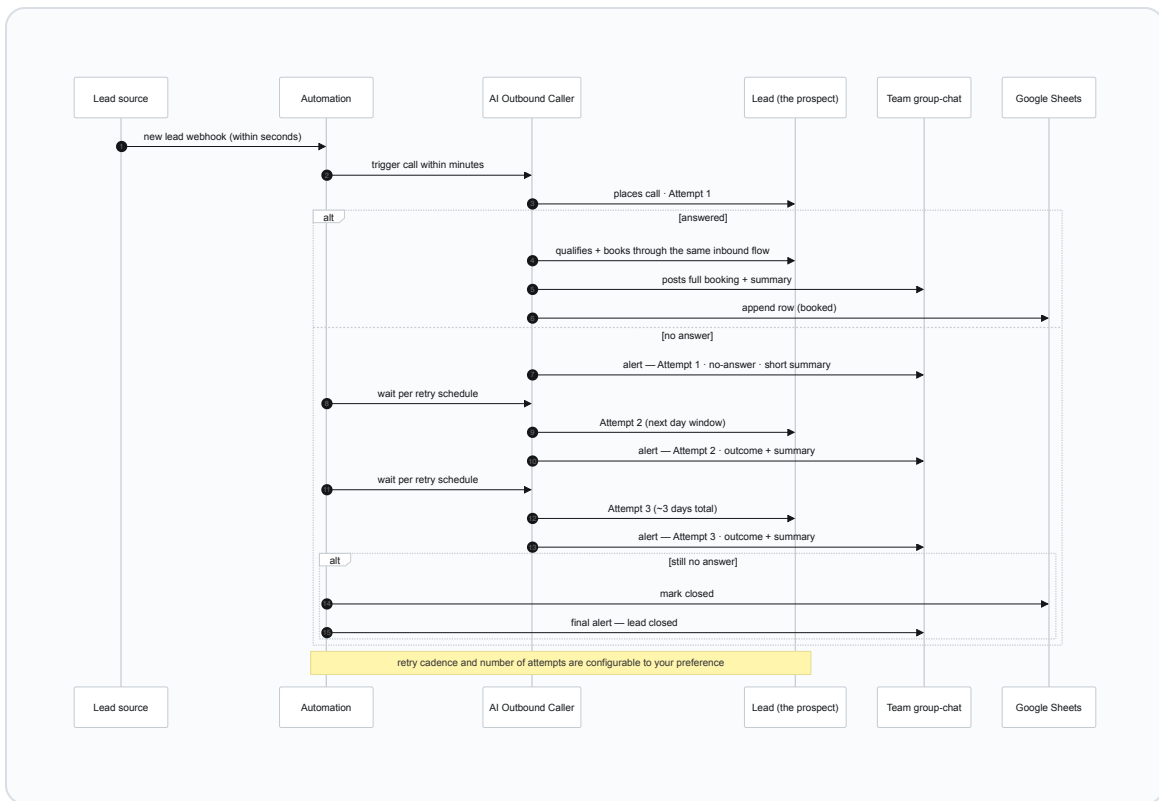

WHAT HAPPENS WHEN

Step by step over time · one inbound call, then one outbound retry chain

INBOUND: A CUSTOMER CALLS THE SHOP

OUTBOUND: A NEW LEAD ARRIVES FROM YOUR LEAD SOURCE

Internal alerts every attempt — outcome (answered / no-answer / voicemail) + short call summary, never silent

Same booking core — an answered outbound call books exactly the same way as an inbound call

You set the cadence — number of retries and spacing across the days are configurable

One connected system · MVP, not a SaaS · paid per verified milestone

Sequence — prepared for Maya
